

" Your Precision Electroforming Expert. "

Taiwan Puritic Corp.

LIGA-Like production line
Through our in-house lithography and electroforming facilities, TPC provides customized services including lithographic designing, mold developing, and producing micro-level parts by precision electroforming.

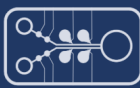

Precision Electroforming
According to your specs and request, from mask designing, mold core developing, to mass production, TPC provides tailored, professional solution with high accuracy and quality to you.

Metal electroplating
TPC possesses great experience in electroplating technology. Through this technology, the lifespan and corrosion resistance of products such as medical equipment or metal component are able to be enhanced.

Multi-application customized development and Manufacturing

Biochip/
Microfluidics

Microporous
Mesh Plate

Light-guiding Plate
Mold Core

Microprobe

Inkjet Nozzle Plate

Precision tool/
Component

It is also suitable for high-precision electroforming and electroplating applications such as precision tools, photomask for deposition, microporous filter chips, micro-electromechanical components, printed metal plates, etc. If you have any further questions or request, please contact us.

TPC-Medical Materials Development & Manufacturing Division

Any comments and suggestions will be appreciated. If you have any further questions or request, please contact us as follows.
